

ERIC CHOUR

SOFTWARE ENGINEER · FULL-STACK · AI & AUTOMATION

📞 346-400-7317 ✉ ech2447@gmail.com 🔗 linkedin.com/in/ericchour 🐙 github.com/ecdevv 🌐 ericchour.com

EDUCATION

University of Houston · Houston, TX Aug. 2019 - May 2023
B.S. in Computer Science, Minor in Mathematics GPA: 3.82
Coursework: Data Structures, Algorithms, Software Design, Database Systems, Operating Systems, Computer Networks, Linear Algebra, Discrete Mathematics

TECHNICAL SKILLS

Languages TypeScript/JavaScript, Python, C++, C, SQL
Frameworks React, Next.js, Vite, Tailwind, Node.js, Express
AI/ML OpenAI API, Anthropic API, Gemini API, Hugging Face, llama.cpp, agentic systems, tool calling
Tools Git, Linux, PostgreSQL, Supabase, MySQL, LaTeX

EXPERIENCE

Software Engineer · Z-Co Development (Contract) · Houston, TX May 2026 - Present

- Built an internal operations portal (Next.js, TypeScript, Supabase/PostgreSQL) that consolidates project, vendor/subcontractor, and contact data from fragmented tools (project management, legacy construction-management software, spreadsheets) into a single system, eliminating manual cross-tool data entry and duplicate lookups.
- Automated pipeline/workflow tracking with a drag-and-drop Kanban, auto-logged stage changes, and an activity audit trail; role-based access enforced at the database layer via PostgreSQL row-level security.
- Building a read-only AI assistant (Anthropic API, tool calling, human-in-the-loop) that lets non-technical staff query consolidated operational data in plain English, replacing manual report pulls and ad-hoc lookups.

PROJECTS

Lumen · Rust, llama.cpp · github.com/ecdevv/lumen May 2026 - Present

- Built a Rust CLI coding agent that runs local-first LLMs via llama.cpp; OpenAI-compatible Provider trait lets remote backends (Anthropic, OpenAI, Gemini) drop in without refactoring.
- Structured as a Rust workspace with a strict core (lib) and cli (bin) boundary, keeping the agent core reusable beyond the terminal.
- Implemented streaming responses, tool calling, model/settings pickers, and JSONL session persistence. Currently v0.1.0 and in active development.

CritiCore · Next.js, TypeScript, Tailwind, Redis · criticore.vercel.app Nov. 2024 - Jan. 2025

- Built a Next.js game reviews aggregator with dynamic Steam-only search and unified scoring pulled from Steam and OpenCritic APIs.
- Added an Upstash/Redis caching layer over the upstream APIs to keep navigation fast despite live data dependencies.

Urban Luxe · Next.js, TypeScript · urbanluxe.vercel.app Jun. 2024 - Jul. 2024

- Built a Next.js apparel storefront with dynamic product pages, filtering, a homepage carousel, and an interactive shopping cart.
- Designed a typed product data layer to enable clean backend integration later, and applied SEO enhancements (robots.txt, sitemaps, Open Graph) for discoverability.

Amusement Park Graph Analyzer · C++ · Academic, Team of 3 Nov. 2021 - Dec. 2021

- Implemented a C++ analyzer to evaluate amusement park blueprints modeled as graphs.
- Computed minimum spanning trees of road networks via Kruskal's algorithm to identify optimal connection paths between attractions.
- Detected Eulerian paths and circuits using depth-first search to find traversals visiting all attractions exactly once.
